## SEASONALLY ADJUSTED INDICATORS

1973

## ADDENDUM

The following figures have become available since tables and graphs for these particular series were prepared for this bulletin.

Page	Series			Original	Seasonally Adjusted
	<b>PRODUCTION –</b>				
34	Black coal ('000 tons)	April	1973	4,030	5,278
		May	1973	5,898	5,145
35	Electricity (million kWh)	May	1973	5,892	5,495
		June	1973	5,975	5,471
36	Ingot steel ('000 tonnes)	May	1973	643.5	626.1
		June	1973	485.7	494.4
37	Cement ('000 tons)	May	1973	462	432
		June	1973	430	421
38	Clay bricks (million)	May	1973	155	138
		June	1973	163	162
39	Sulphuric acid ('000 tons)	May	1973	216	209
		June	1973	215	254
40	Motor vehicles (No.)	May	1973	41,850	35,426
		June	1973	31,796	31,820
41	Electric motors under 1 hp ('000)	May	1973	384.3	356.1
		June	1973	294.5	311.4
42	Domestic refrigerators (No.)	May	1973	24,457	27,569
		June	1973	19,093	22,142
43	Television sets (No.)	May	1973	43,691	36,258
		June	1973	31,765	30,199
44	Cotton woven cloth ('000 sq yd)	May	1973	5,138	4,844
		June	1973	5,198	4,380
45	Woollen and worsted woven cloth ('000 sq yd)	May	1973	1,475	1,443
		June	1973	1,290	1,582
46	Boots and shoes ('000 pairs)	April	1973	2,535	2,656
		May	1973	3,515	3,170
47	Beer ('000 gallons)	May	1973	33,318	35,660
		June	1973	21,710	27,413
48	Tobacco and cigarettes (tonnes)	May	1973	2,674	2,724
		June	1973	2,574	2,557
49	Beef and veal (tons)	May	1973	144,858	120,810
50	Mutton and lamb (tons)	May	1973	44,616	43,418
51	Whole milk (million gallons)	April	1973	95.4	144.1
		May	1973	79.5	142.6
	<b>OVERSEAS TRANSACTIONS –</b>				
53	Total exports (\$m)	June	1973	571.8	591.4
54	Total imports (\$m)	June	1973	399.1	425.1
55	Exports of wool (\$'000)	July	1972	r62,243	64,168
		Aug.	1972	r72,837	90,484
		Oct.	1972	r57,700	68,066
		Nov.	1972	r82,454	77,832
		Dec.	1972	r103,262	101,990
		Jan.	1973	r137,709	112,279
		Feb.	1973	r125,179	125,576
		March	1973	r125,583	106,850
		April	1973	107,034	104,054
		May	1973	136,456	110,228
58	Gold and net foreign assets (Official and banking institutions) (\$m)	March	1973	r4,267	4,304
		April	1973	r4,227	4,182
		May	1973	4,297	4,141
	<b>OVERSEAS ARRIVALS –</b>				
59	Short-term visitors arriving (No.)	April	1973	36,305	41,767
	<b>EMPLOYMENT AND LABOUR –</b>				
	<b>Number Receiving Unemployment Benefit –</b>				
76	Males (No.)	June	1973	24,396	23,401
77	Females (No.)	June	1973	13,549	13,009
78	Persons (No.)	June	1973	37,945	36,449
79	Males (No.)	June	1973	51,627	56,669
80	Females (No.)	June	1973	29,749	32,828
81	Persons (No.)	June	1973	81,376	89,470

Page	Series			Original	Seasonally Adjusted
	<b>EMPLOYMENT AND LABOUR – continued</b>				
	<b>Number Registered for Employment with Commonwealth Employment Service –</b>				
82	Males, excluding school leavers (No.)	June	1973	49,975	47,310
83	Females, excluding school leavers (No.)	June	1973	27,887	25,535
84	Persons, excluding school leavers (No.)	June	1973	77,862	72,898
	<b>Job Vacancies Registered with Commonwealth Employment Service –</b>				
85	For males (No.)	June	1973	33,813	44,952
86	For females (No.)	June	1973	20,695	25,531

## PREFACE

This is the seventh in a series of annual bulletins presenting in seasonally adjusted form selected statistical indicators of Australian economic activity. It continues the series published in the 1972 edition, with the exception of the meat production series which has been replaced by its two major components, beef and veal production and mutton and lamb production. In addition, it includes further component series relating to employment and national accounts which have previously been published in other Bureau publications.

Presentation of these seasonally adjusted series is intended to serve as an aid in statistical interpretation and analysis. The series are shown as originally compiled and as seasonally adjusted, both in tabular and graphical form, covering where possible the past fifteen-year period. Selected seasonally adjusted series are also presented on semi-logarithmic charts to facilitate comparison of rates of growth of series of differing magnitude.

Explanatory notes on the nature of the statistical series included in this bulletin are given in Appendix A, together with references to publications containing more detailed information.

The seasonally adjusted series published by this Bureau are calculated by electronic computer methods. The basic seasonal analysis program employed is the X-11 variant of the U.S. Bureau of the Census Method II seasonal adjustment program, a brief outline of which may be found in the following "Notes on Seasonal Adjustment Methods". The data tables and graphs presented in this bulletin have been reproduced directly from computer output produced by means of ancillary programs developed by this Bureau. This has been a feature of this series of bulletins since its inception in 1967. These programs are now incorporated in an integrated time-series system currently being developed to provide for the manipulation, analysis and tabulation of time series data. Additional facilities available from this system have also contributed to the production of this bulletin.

It will be recognised that seasonal adjustment may be carried out by means of any one of a number of accepted procedures, each of which can be expected to yield results differing in greater or lesser degree from those of other methods. In interpreting particular seasonally adjusted statistics it is important, therefore, to bear in mind the methods by which they have been derived and the limitations to which the methods used are subject. The explanation of seasonal adjustment methods used by this Bureau, given in the following pages, together with details in Appendix B of the methods of adjustment employed for each seasonally adjusted series published by the Bureau, is intended to serve these purposes. To assist further in interpreting particular seasonally adjusted series, details of selected measures of variability for each individual series published in seasonally adjusted form by this Bureau are provided in Appendix C.

Further seasonally adjusted figures for each of the series included in this Bulletin will be published, as they become available, in the relevant monthly and quarterly publications of the Bureau referred to in Appendix A. Current figures for most of these series are also published in the *Monthly Review of Business Statistics* and the *Digest of Current Economic Statistics*.

## Gross fixed capital expenditure : Public —

At current prices . . . . . 146

At average 1966-67 prices . . . . . 147

## Exports of goods and services —

At current prices . . . . . 148

At average 1966-67 prices . . . . . 149

## Imports of goods and services —

At current prices . . . . . 150

At average 1966-67 prices . . . . . 151

**GENERAL NOTES**

- (1) All seasonally adjusted figures are subject to revision.
- (2) All figures relate to Australia as a whole unless otherwise stated.
- (3) All values are in Australian dollars.
- (4) A brief description of the timing, coverage, etc. of each series is given in Appendix A.
- (5) The same logarithmic scale is used in all semi-logarithmic charts.

## INTERPRETATION OF SEASONALLY ADJUSTED STATISTICS

Users of seasonally adjusted statistics should bear the following points in mind.

1. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from statistical series, so that the effects of other influences on the series may be more clearly recognised.
2. In the seasonal adjustment of certain statistical series published by this Bureau, adjustments have been made for the effects of some calendar irregularities, for example: "trading-day" effects (e.g. having four or five Fridays in a particular month); and the effects of movable holidays, i.e. Easter and Australia Day. These adjustments have been made where warranted by prior analyses. Since these adjustments materially affect the results, users should particularly note whether or not these calendar adjustments have been made to particular series. This is indicated in Appendix B.
3. Seasonal adjustment does not remove the effect of other influences from the statistics; in particular it does not remove any unusual irregular movement which may be present in any particular month or quarter (e.g. the effect of a major industrial dispute). Therefore, an unexpected upward or downward movement in a seasonally adjusted series does not necessarily denote a change of trend.
4. Among the irregular movements (i.e. those not removed by seasonal adjustment) would be movements due to any abnormal "seasonal" effect : e.g. the effect of the fruit-picking season starting early or late in a particular year. This effect would remain in the adjusted figures.
5. The methods of seasonal adjustment employed allow for gradual changes in the seasonal pattern, so that current figures are adjusted in accordance with the estimated normal seasonal pattern of the recent past.
6. However, the methods used may not give an adequate adjustment if there should be an abrupt change of seasonal pattern in any series in the future.
7. The methods have required judgment to be used in the choice of certain specifications — though once the specifications have been chosen, the adjustment of the statistics proceeds each month without subjective judgment having to be used. For this reason the adjusted series are always in a sense estimates, and are not definitive statistics in the same sense as the original statistics are.
8. Seasonally adjusted statistics will be revised following revisions to the original data and as additional data are brought into the analysis each year.
9. *For these reasons, therefore, it would be neither reasonable nor prudent to regard seasonally adjusted series as in any way "definitive". They must be treated with caution as being no more than useful indicators of movements. They can without doubt be a useful aid to critical interpretation, but can in no way be a substitute for it.*

For a more complete explanation of how the series included in this bulletin have been seasonally adjusted and how the results should be interpreted, reference should be made to the description which follows of the seasonal adjustment methods adopted.

## NOTES ON SEASONAL ADJUSTMENT METHODS

### INTRODUCTION

It is often useful and sometimes necessary in interpreting quarterly and monthly statistical series to recognise and take account of the element of variation due to what are commonly known as seasonal influences. As a supplement to personal judgement, statistical techniques can be used to evaluate the effects of normal seasonal influences operating on a series. This kind of evaluation does not call for subjective judgment except in the choice of the appropriate statistical techniques. The techniques are called seasonal analysis, and they are designed to enable the series to be seasonally adjusted — that is, to have the estimated effects of normal seasonal influences removed from them.

2. Normal seasonal influences on statistical series are those influences that tend to recur regularly once or more a year. Not all statistical series are affected by seasonal influences in a manner regular enough to be called “normal”; if they are not they cannot usefully be seasonally adjusted. Those that are seasonally affected usually reflect the influence of the seasons themselves, either directly or through production series related to them (such as farm production), or social conventions (such as the incidence of holidays) or administrative practices (such as the timing of tax payments). Many of them also reflect differences in the composition of the months, in terms of the number of trading days and the accounting practices adopted.

3. It is important that users have a clear understanding of what has been removed from the series by seasonal adjustment, and the limitations to which the seasonally adjusted series are subject. It is hoped that these introductory notes will help to achieve this object. A more detailed description was given in *Seasonally Adjusted Indicators 1967*.

### BASIC PROCESSES OF SEASONAL ADJUSTMENT, SIMPLE METHODS

4. The basic concepts underlying the seasonal adjustment methods employed by this Bureau are best explained by reference to the simpler methods in use before the introduction of computers. These illustrate basic processes common to most seasonal adjustment methods.

5. Most series are seasonally adjusted by dividing the original figures by factors which represent in ratio form the effects of normal seasonal influences on the various months in that series. Such adjustment is called *multiplicative*. Less common is *additive* adjustment, in which estimated seasonal *differences* are deducted from the original series.

6. In estimating seasonal adjustments, it is first necessary to calculate *trend* values for each month (or quarter) in the series. The simplest estimate of trend is the centred twelve-month moving average of the original series. A twelve-month moving average of the original series is another series, each term of which is the average of twelve consecutive monthly figures in the original series. The centre of this moving average would fall between the sixth and seventh month. To make it coincide with a particular month, the average is then taken of all pairs of consecutive months in the moving average series itself. This second moving average is called a centred twelve-month moving average, and is equivalent to a  $2 \times 12$ -term moving average, that is, a two-term moving average of a twelve-term moving average. The corresponding simple estimate of trend for a quarterly series is obtained by a  $2 \times 4$ -term moving average.

7. A set of ratios (larger or smaller than one) or differences (plus or minus) may be obtained by dividing the original series by the trend figures, or by subtracting the trend figures from the original figures. The ratios or differences so obtained are known as *seasonal-irregular* ratios or differences and are considered to include both normal seasonal influences and other, irregular, effects peculiar to the month or quarter in question. The effect of normal *seasonal* influences for each of the twelve months of the year is estimated as an average of the seasonal-irregular ratios or differences for that month of successive years. The average ratios or differences are referred to as seasonal factors or seasonal differences. They may be used to adjust the original series for the normal seasonal movement of which they are estimates, thereby giving a seasonally adjusted series.

## SEASONALLY ADJUSTED FIGURES AS COMBINATION OF TREND AND IRREGULAR COMPONENTS

8. These simple methods reflect the assumption underlying most seasonal adjustment methods, namely, that the original series can be represented by three components: *trend*, *seasonal* and *irregulars*. Removing the trend (either by division or subtraction) leaves the seasonal-irregulars. The seasonal (for each month or quarter of the year) is derived from these by averaging them, in order to "cancel out" irregulars. The irregular can be isolated in turn by removing both the trend and the seasonal from the original figure. It is to be noted that the existence of a seasonal as a component of a figure in a statistical series is merely an assumption. The "true" seasonal, if it exists, is not known, and the methods available only enable it to be estimated. Similarly, the trend is only the estimated trend, as the "true" trend is not known. The irregular depends entirely on the value of the estimates of seasonal and trend.

9. The most important inference to be drawn is that seasonally adjusted series reflect irregulars as well as trend. Therefore, they may not be the "smooth" series the user may expect, and they can be used only approximately as measures of trend. An apparent change of direction from one month to another may have been due to the irregular component, not to a change of trend, and the series may resume its former movement the following month. Therefore, to determine whether a given change of direction in a seasonally adjusted series is a "downturn" or an "upturn" in the trend, requires judgment on the part of the user, which must be based largely on the extent to which the adjusted series has shown irregular movements in the past.

10. It may be noted in passing that a particular kind of irregular movement occurs if there is a temporary change in seasonal influence. For example, unemployment may increase each year as the fruit-picking season ends, but the season may end a month early in one year. The resulting rise in unemployment may, therefore, not be offset by seasonal adjustment until the following month, when unemployment would be expected to increase according to the normal seasonal pattern. Therefore, the seasonally adjusted figures will show an irregular increase, followed by an irregular decrease a month later.

## CENSUS METHOD II, X-11 VARIANT

11. This Bureau has adopted for its standard methods of seasonal adjustment, the X-11 Variant of the Census Method II Seasonal Adjustment Program and its companion quarterly program X-11Q. Some minor changes have been made to the basic programs in the Commonwealth Bureau of Census and Statistics, and they have been extended to meet specific Australian requirements and to facilitate automatic presentation of results in the format preferred by this Bureau. No more than a general outline of the features of these programs is offered in this note. For further details, reference should be made to *The X-11 Variant of the Census Method II Seasonal Adjustment Program*, Technical Paper No. 15, United States Department of Commerce, Bureau of the Census, February 1967.

## FEATURES OF THE X-11 PROGRAMS

12. These programs are essentially elaborations of the classical methods of seasonal adjustment, incorporating features specifically designed to overcome short-comings of simpler methods.

13. The more important features of the monthly X-11 program may be summarised as follows.

- (a) It provides for additive as well as multiplicative adjustment (i.e. difference-from-trend as well as ratio-to-trend).
- (b) It yields improved trend estimates by applying an appropriate moving average (chosen automatically from three alternatives of different lengths and weights) to preliminary seasonally adjusted values, thereby reducing the effects of any residual trend on estimates of seasonal and irregular components. Trend estimates are made for each month of the series and thus permit estimates of seasonal-irregulars over the entire series (including the first and last six months).
- (c) It identifies and discounts the effects of extreme values in estimating seasonals and trend values.

- (d) It allows for gradual changes of seasonal pattern from year to year, estimating seasonals for each period as an appropriate weighted moving average of seasonal-irregulars for months of the same name. Four alternative weighted moving averages are provided, for series of differing degrees of irregularity.
- (e) It estimates forward factors for the twelve months after the latest figure of the series, thus enabling adjustment of additional figures for up to a year without re-analysis.
- (f) It provides for "trading-day" adjustments and for the estimation of such adjustments from the series itself.
- (g) It allows for optional prior adjustment of the series before analysis, to permit adjustment for influences not otherwise provided for. This facility can be used, among other things, to adjust for the changing effects of holidays such as Easter which may differently affect months in successive years.
- (h) It provides as an option a further procedure designed to prevent the seasonal adjustment from being distorted by the effects of any severe industrial disputes or other major irregular occurrences.
- (i) It provides a range of summary measures which can be useful in selecting from among the various options available for the analysis and adjustment of the series and in interpreting movements in the adjusted series.

14. The companion X-11Q program used for quarterly series is similar in its features but does not provide for the estimation of trading-day adjustments, or for alternative types of weighted moving averages in the estimation of seasonal factors and trend.

15. The programs proceed by iteration. The series is firstly adjusted by any prior adjustments or preliminary trading-day adjustments. The initial centred twelve-month or four-quarter moving average is used to derive provisional seasonal factors and a provisional seasonally adjusted series. This series is then subjected to trend-fitting; seasonal factors are re-estimated; a new seasonally adjusted series is obtained and the trend is removed to obtain irregulars; if required, residual trading-day variation is estimated and removed from the irregulars; extreme irregulars are identified and modified; and the process is repeated with trend being re-estimated from a modified original series. Because seasonal, trend and irregular are complementary parts of a whole, any improvement effected by the process of iteration in the estimate of one part improves the others.

#### SUMMARY OF X-11 PROGRAM OPTIONS

16. A wide variety of seasonal adjustment procedures is permitted by either program. This is to suit the widely differing characteristics of series with regard to the magnitude of the trend, seasonal and irregular components of variation and some spasmodic influences which may affect series. The following is a brief account of the available program options and the way in which they are applied.

- (a) **Additive or multiplicative adjustment.** For economic series which have only positive values, seasonal variations usually tend to be proportional to trend. Therefore, the multiplicative method is usually the more appropriate. Additive adjustment is likely to be appropriate if a series can take both positive and negative values.
- (b) **Variable trend-cycle curve routine.** The program provides as optional alternatives 9-, 13-, or 23- term (Henderson) weighted moving averages of the initially estimated seasonally adjusted series for purposes of trend estimation. The appropriate weighted moving average may either be selected automatically by the computer or be specified independently. If the irregular variation tends to be high in relation to the variation in trend, a long moving average is indicated to smooth out the effects of the irregulars. If it tends to be low, a short moving average is indicated, to fit the trend more closely to the curves of the data. The X-11Q program provides only a 5- term weighted moving average.

- (c) **Seasonal factor curve routine.** The X-11 program provides as optional alternatives for estimating seasonal factors 3-, 3 x 3-, 3 x 5-, or 3 x 9- term weighted moving averages or a simple average covering all years of the series. Unless otherwise specified, the program employs as standard a 3 x 5- term weighted moving average, but any of the alternatives may be employed for estimating seasonal factors for any named month. (For series in this bulletin the standard 3 x 5- term moving average has been used, except for some series having irregular variation which is relatively high in relation to the estimated year-to-year change in seasonal factors. For these series the 3 x 9- term moving average has been used for all months). The X-11Q program provides only a 3 x 5- term weighted moving average.
- (d) **Graduated treatment of extremes.** Both programs contain a statistical procedure whereby unusually large or small values are objectively identified and discounted for purposes of calculating seasonal factors and trend values, thus preventing the estimated seasonal factors from being unduly affected by purely irregular influences. Preliminary estimates of the irregular component are tested for extremeness by comparison with their average value and their standard deviation. Values larger or smaller than the average by more than 2.5 standard deviations are regarded as extreme and are given zero weight. Values within 1.5 standard deviations of the average are regarded as normal and receive full (unit) weight. Values between these limits receive a proportionate intermediate weight. Alternative limits may optionally be specified.
- (e) **Trading-day adjustment.** Specific provision for trading-day adjustment exists in the X-11 (monthly) program but not in the X-11Q (quarterly) program. Monthly trading-day adjustments are calculated by the X-11 program from 7 daily weights (one for each day of the week, some of which may be zero) combined according to the number of times each day of the week occurs in the particular calendar month. Allowance for the varying lengths of calendar months may be included in either the trading-day adjustments or the seasonal factors. The trading-day weights may be supplied independently from previous or external information to effect the trading-day adjustment prior to seasonal analysis by the X-11 program. Alternatively, use may be made of the X-11 trading-day regression which derives a set of trading-day weights by relating the pattern of fluctuation in the estimated irregular component to the pattern of changing combinations of days of the week in the calendar months. The regression procedure may be used in conjunction with a prior trading-day adjustment to test for residual trading-day variation or alternatively to obtain improved estimates by combination of the prior weights and the residual regression estimates. Further options provide for the calculation and/or application of regression estimates of trading-day variation either to the whole series or the part of the series following a specified year; and variation of limits for identifying extremes which are excluded for purposes of the trading-day regression. Trading-day adjustments made to series in this bulletin are largely based on regression estimates obtained in special analyses by the X-11 program made beforehand.
- (f) **Adjustment for severe industrial disputes or other major irregular occurrences.** By the application of this option, the figures for months or quarters affected by an industrial dispute are replaced in the calculation of trend by substitutes more in line with preceding and subsequent figures. The seasonal-irregulars for the period are then more clearly identified and discounted as extreme, while the effects of the industrial dispute are fully reflected in the seasonally adjusted series. Care must be exercised in using this option which may also affect estimation for periods of marked trend change. No use has been made of this option in the adjustment of series included in this bulletin.
- (g) **Prior adjustment.** Prior to seasonal analysis, an adjustment may be made to any one or more of the figures in a series to yield a prior adjusted series. Seasonal factors for the prior adjusted series are then estimated and are used, either by themselves or combined with the appropriate prior adjustment factors, to seasonally adjust the original series. This technique is used mainly to effect calendar adjustments *other than* for monthly or

quarterly patterns for which both the X-11 and X-11Q programs provide, and weekly trading-day patterns in monthly series for which the X-11 program provides. Calendar effects, where measurable, are estimated by regression methods on the basis of the series' past behaviour. These measures are then used to deduce prior adjustment factors appropriate to each month or quarter of the series. Combining these prior adjustments with seasonal adjustments derived from seasonal analysis of the prior adjusted series provides combined adjustment factors by which the original series is seasonally adjusted. Such uses made of prior adjustment are :

- (i) *Trading-day variation in quarterly series* where measurable trading-day patterns are detected;
- (ii) *Special types of trading-day variation* other than simple weekly patterns, such as fortnightly pay-days and twelve-weekly payments of child-endowment;
- (iii) *Movable public holidays*, namely, Easter which may fall in either March or April, and Australia Day which may fall in either January or February, where such effects are measurable and significant.

Alternatively, or in addition, prior adjustment may be used in cases of series subject to abrupt discontinuities affecting the seasonal pattern or the trend, or exceptionally large irregular movements where they would, if not allowed for in the seasonal analysis, adversely influence the estimation of seasonal factors, at least for periods immediately preceding and following such influences. This technique is used in this way only in cases of discontinuities or irregularities of a magnitude larger than may be handled satisfactorily by the graduated treatment of extreme values performed by the X-11 programs (see (d) above) and then only when the nature of the disturbance is understood and its magnitude known sufficiently accurately. Prior adjustment factors may be estimated by statistical comparison of data before and after the change or on the basis of supplementary information if available. These prior adjustment factors are applied in cases of discontinuities to the figures for months or quarters preceding the discontinuity, to align their seasonal pattern or trend with that of subsequent original figures; and in the case of exceptional irregular movements, to the months or quarters affected to align their figures with original figures for preceding and succeeding periods. Seasonal adjustment factors are then derived for the prior adjusted series, and are thus unaffected by the discontinuity or irregularity so allowed for. As is evident from the manner described below of effecting seasonal adjustment, it is relatively insensitive to the magnitude of the prior adjustment factors used. Such cases in which use is made of prior adjustment are:

- (iv) *Abrupt changes in seasonal pattern*, for instance those affecting several production series following the extension of statutory annual leave in October 1963. In this case, prior adjustment factors are combined with the seasonal adjustment factors derived from the prior adjusted series to yield combined factors by which the original figures are seasonally adjusted. This technique cannot reasonably be applied at the time of the change in seasonal pattern, but only some years after the event when the magnitude and persistence of the discontinuity is established.
- (v) *Abrupt trend discontinuities*, which can arise from a change in the concepts, definitions or coverage of a statistical series, as for instance in seasonally adjusting indexes of values of exports and imports at constant prices, breaks in which occur owing to changes of base year. Seasonal factors derived from the prior adjusted series are applied directly to the original series to yield a seasonally adjusted series which fully reflects the trend discontinuity. This technique is particularly useful where the discontinuity affects the most recent months or quarters of a series, as without it satisfactory seasonal adjustment may not be possible. In this case, however, a pre-requisite is a satisfactory estimate of the magnitude of the trend discontinuity.

- (vi) *Exceptionally large irregular movements*, which might result from a severe industrial dispute or similar exceptional events. As in the case of trend discontinuity, seasonal adjustment factors derived from the prior adjusted series are applied to the original series, so that the effects of the exceptional movement are fully reflected in the seasonally adjusted series. This technique is only applied retrospectively.

17. In the interpretation of seasonally adjusted series, the application of standard options may be taken largely for granted by users of seasonally adjusted series as being technical in nature. These are the options concerning multiplicative or additive adjustment, the variable trend-cycle curve routine, the seasonal factor curve routine and the graduated treatment of extremes. Users should take note of whether use has been made of trading-day adjustments, prior adjustments for any purposes, and adjustment for severe industrial disputes. This is important as their application can markedly affect the results obtained and the interpretation to be placed on them.

18. Except where the series have been adjusted aggregatively (see below), the particular program options employed in the adjustment of series published by this Bureau are set out in Table 1, Appendix B, "Methods of Adjustment Employed".

## AGGREGATIVE SEASONAL ADJUSTMENT

19. The foregoing account of the application of the X-11 programs applies to the adjustment of a series as it stands, that is, the *direct adjustment* of the original series. Alternatively it is possible to adjust an aggregate series by seasonally adjusting a number of its components and adding up the results. In cases where the component series exhibit markedly different trends and seasonal patterns, *aggregative adjustment* may be preferred to direct adjustment. Numerous empirical studies made to date suggest that, mostly, little difference is discernible in the effectiveness of direct and aggregative adjustment and for some, direct adjustment appears superior. As direct adjustment is simpler in operation, its use is to be favoured generally unless the results are recognisably inferior to those of an alternative aggregative adjustment.

20. It is to be noted in this regard that certain series (such as those relating to employment, unemployment, registered vacancies, retail sales, value of work done on new buildings and capital expenditure) included in this bulletin appear both as components and aggregates. Following the approach mentioned in the previous paragraph, each of these series has been adjusted independently. This means that while the unadjusted components add to the totals, the adjusted components may not add to the adjusted totals. The differences are generally not large, in comparison with the month-to-month variability of the seasonally adjusted series.

21. On the other hand, most of the seasonally adjusted series for principal aggregates in the national accounts have been obtained aggregatively, that is, by adding seasonally adjusted component series. Besides retaining, as far as possible, the essential accounting relationships, the aggregative approach is needed because many of the aggregates include components having different characteristics, and requiring different methods of adjustment.

22. In addition to the principal aggregates in the national accounts, aggregative adjustment is employed in seasonally adjusting certain series which are comprised of disparate components. Where series have been adjusted aggregatively, details of the methods used are presented in Table 2 in Appendix B.

## SUMMARY MEASURES

23. The X-11 programs provide a large range of statistical measures, tests of significance and graphs which may be used in the choice of program options. Some of the summary measures help the user to interpret the results by giving an indication of the relative magnitude of the seasonal effects which have been removed from the series, and a guide as to how much of the variability of the series is due to trend and irregular elements. Some of the more important and easily interpreted summary measures for each of the series published by this Bureau are given in Appendix C, "Measures of Variability".

24. The summary measures given in Appendix C are the average percentage change from month to month (without regard to sign) in the original and seasonally adjusted series, in the trend and irregular series, in the seasonal factors, and in the trading-day adjustments where these have been made. For seasonal factors, the average percentage change from year to year (without regard to sign) is also given. This shows the average rate at which the seasonal pattern is estimated to have been changing from year to year.

25. The effects removed by any prior adjustments made, such as those made in some series for Easter or Australia Day, are not included in the summary measures relating to the trend and irregular series, seasonal factors and trading-day factors.

26. The measures of variability given in Appendix C serve to give some indication of whether a movement in a seasonally adjusted series is attributable to influences beyond the normal irregular variation and normal changes in the seasonal pattern. It is, however, to be borne in mind that measures of the month-to-month and year-to-year change given in Appendix C are averages; changes for the individual months and years may be considerably larger or smaller than the averages shown.

## REVISIONS TO SEASONAL FACTORS

27. It is necessary to revise seasonally adjusted statistics from time to time. This is necessary not only because of amendments in the original series, but because the adjusted series is changed every time the computer analysis is repeated to bring in another year's figures. This means revision of the whole seasonally adjusted series, although the changes in early years would be expected to be minor. The fact that seasonally adjusted series will be revised every time the computer absorbs another year's data is inherent in the nature of the X-11 program and, in fact, all complex programs of this kind. In effect, the new data provide further observations upon which estimates of trend, seasonal factors and limits for identifying extreme values are based. The latter estimates, presumably the more accurate, can generally be expected to differ somewhat from earlier ones based upon less recent original data.

28. As a rough rule of thumb, derived from Australian monthly series analysed to date, the average of the differences for the most recent common year, between successive revisions in the seasonally adjusted monthly series, can be expected to be approximately one-half the average percentage change from month to month in the irregular series (given in Appendix C), but this can be expected to fall to about one-fifth of the average percentage change from month to month for years four or more earlier. Comparable revisions to quarterly series can be expected.

29. In the seasonally adjusted figures for some individual months, however, some revisions may be considerably larger (or smaller) than those suggested by this rule of thumb. The tendency to larger revisions is most marked for months affected by large changes in trend or seasonal pattern. As might be expected, the tendency of successive revisions is generally to "smooth out" fluctuations appearing in the initial seasonally adjusted series.

## NATIONAL ACCOUNTS SERIES

30. This bulletin includes a selection of the seasonally adjusted series published in *Quarterly Estimates of National Income and Expenditure*. Owing to the difficulty of obtaining the necessary up-to-date and detailed data, much of the current information used in preparing the original figures of Quarterly Estimates of National Income and Expenditure is usually of an approximate nature and is subject to revision as more complete and accurate information comes to hand. Consequently, both the original and seasonally adjusted series are subject to frequent amendments. As mentioned above in Paragraph 21 most of these series of seasonally adjusted national accounting aggregates have been derived using aggregative methods, that is, as the sum of seasonally adjusted component series rather than by direct adjustment of the aggregate series. Also, since some of the series are not amenable to the usual methods of seasonal adjustment, special methods of adjustment have been used in some cases. A description of the methods of adjustment employed is given in Appendix B.

## LIMITATIONS OF SEASONALLY ADJUSTED STATISTICS

31. Despite their versatility, the X-11 programs rely essentially upon the logic of the simple classical methods described earlier. Although they overcome many of the shortcomings of simpler methods, they are subject to the same basic limitations of all such methods. Of these, the most important limitation stems from the inherent impossibility of defining precisely the trend, seasonal and irregular components (at least for statistics relating to economic and social phenomena) except in terms of estimates obtained by a particular method. Consequently, no objective assessment of reliability may be made for any such methods, and comparisons of results obtained by alternative procedures must always involve an element of judgment.

32. A further limitation derives from a fundamental assumption underlying seasonal analysis and adjustment techniques. It is assumed implicitly that while trends and seasonal patterns underlying the series may change, such changes are not abrupt. The X-11 programs, and in fact all seasonal adjustment programs yet developed, tend to yield recognisably unsatisfactory results where an abrupt change affects the seasonal pattern of a series.

33. The optional alternative procedures allowed by the X-11 programs provide some means for overcoming problems of this kind. However, the remedies provided by the X-11 program are available only some time after the change has occurred. It is impossible for the most part to recognise and assess changes in seasonality at the time they occur. The seasonal analysis alone cannot indicate whether an unexpected movement appearing in current seasonally adjusted figures denotes a variation in trend or an unusual (irregular) effect, or whether it is due to an abrupt change in seasonality.

34. Furthermore, it is to be borne in mind that by using alternative program options the X-11 programs will yield results which may differ markedly from each other. As implied above, it is sometimes by no means easy to decide which of some feasible options should be employed.

35. Consequently, it would be neither reasonable nor prudent to regard seasonally adjusted series as in any way "definitive". They must be treated with caution as being no more than useful indicators of movements. They can without doubt be a useful aid to critical interpretation, but can in no way be a substitute for it.

## PRESENTATION OF SEASONALLY ADJUSTED STATISTICS

36. So that the most recent statistics may be seen in ample context, the series given in this bulletin, where possible, cover a span of about fifteen years. As in previous issues, the statistical series in this bulletin are presented as originally compiled and as seasonally adjusted, both as tables and in graphical form on charts of natural (arithmetic) scales. In addition, a selection of seasonally adjusted series is presented on semi-logarithmic charts to facilitate comparison of rates of growth of series of differing magnitude.

37. Additional information, beyond that appearing with the figures for each series, is given in Appendix A under "Explanatory Notes" and in the publications listed in Appendix A.

38. Further seasonally adjusted figures for each of these series will be published, as they become available, in the relevant current publications of the Bureau of Census and Statistics and other authorities as shown in Appendix A.

39. Seasonally adjusted series which are published by this Bureau, but not included in this Bulletin, are listed in Appendixes B and C together with details of the methods of adjustment used and selected measures of variability.

40. The data tables and graphs presented in this bulletin have been reproduced directly from computer output produced by means of the 'Time Series System' being developed by the Bureau. This is a computer system which incorporates, in addition to the basic X-11 and X-11Q seasonal analysis programs, a range of programs and facilities for the manipulation, analysis and tabulation of time series data together with associated storage, maintenance and retrieval operations. On-line storage facilities enable rapid access to data. Further information concerning this system is available on request.

## APPENDIX A

## EXPLANATORY NOTES AND PUBLICATIONS FOR FURTHER REFERENCE

The notes below provide further information on the nature of the series published in this bulletin and references to publications for further details. The publications referred to are, with few exceptions, those monthly and quarterly statements of the Bureau in which subsequent seasonally adjusted figures are to be published.

Subsequent seasonally adjusted figures for most series will also be included in the *Monthly Review of Business Statistics* and a selection will be included in the *Digest of Current Economic Statistics*.

<i>Series description</i>	<i>Page</i>	<i>Explanatory notes</i>	<i>Bureau publication reference numbers*</i>
<b>PRODUCTION —</b>			
Black coal	34	—	10.19; 12.14
Electricity	35	Total generated, including electricity not for sale.	12.14; 12.15; 12.16.5
Ingot steel	36	Includes recovery from scrap.	12.14; 12.15
Cement	37	Portland cement.	12.14; 12.15; 12.16.49
Clay bricks	38	—	12.15; 12.16.49
Sulphuric acid	39	In terms of 100% acid.	12.14; 12.15; 12.16.2
Motor vehicles	40	Cars, station wagons, utilities, panel vans, trucks and truck type vehicles, omnibuses and ambulances. Includes vehicles which are disposed of by the manufacturer in a partly finished state. Prior to July 1963 the series related to the production of motor vehicle bodies assembled from local and imported panels.	12.14; 12.15; 12.16.33
Electric motors under 1 hp	41	Includes those made and incorporated by manufacturers in their own products.	12.14; 12.15; 12.16.23
Domestic refrigerators	42	Electric and gas.	12.14; 12.15; 12.16.9
Television sets	43	Includes combination with radio, etc.	12.14; 12.15; 12.16.34
Cotton woven cloth	44	Cotton woven cloth (including mixtures predominantly of cotton) over 12" wide.	12.14; 12.15; 12.16.14
Woollen and worsted woven cloth	45	Woollen woven cloth (including mixtures predominantly of wool) over 12" wide.	12.14; 12.15; 12.16.17
Boots and shoes	46	Includes sandals and moulded plastic footwear. Excludes thongs, sandshoes, galoshes and gum boots. Prior to July 1963 excludes all slippers. From July 1963 includes cemented, vulcanised rubber and injection moulded plastic slippers but excludes all other slippers.	12.14; 12.16.28

\*See page 166 for key,

## APPENDIX A – continued

<i>Series description</i>	<i>Page</i>	<i>Explanatory notes</i>	<i>Bureau publication reference numbers*</i>
<b>PRODUCTION – continued</b>			
Beer	47	From July 1961 to June 1968, monthly production figures, collected by the Department of Customs and Excise, include waste beer. All other figures, collected by this Bureau, exclude waste beer.	12.14; 12.15; 12.16.42
Tobacco and cigarettes	48	Source of original data : Department of Customs and Excise from July 1968. Prior to July 1971 included cigars.	12.14; 12.15
Beef and veal	49	In terms of fresh meat for human consumption (carcass weight). Total production including estimates of meat from animals slaughtered on farms. Excludes offal.	10.16; 10.54; 12.14
Mutton and lamb	50		
Whole milk	51	Includes whole milk used for factory butter, cheese and processed milk products, as well as milk for domestic consumption.	10.5; 10.6; 12.14
Wool received into store by brokers, first hand	52	Wool received into brokers' stores for disposal at auction, excluding quantities received for re-sale.	(a)
<b>OVERSEAS TRANSACTIONS –</b>			
Total exports	53	Total value of exports recorded in month.	8.9; 8.12
Total imports	54	Total value of imports recorded in month.	8.10; 8.12
Exports of wool	55	Sheep and lambs wool excluding skins and yarns.	8.5; 8.9
Index of value of exports at constant prices	56	These indexes are compiled on the basis of recorded statistics of exports and imports. They measure change in the value of exports or imports after the direct effects of price changes have been eliminated. They may be thought of as being derived by expressing the value of each export or import item as the product of a price and a quantity, and then substituting for each actual current price the corresponding price in the chosen base year. The total value of exports or imports in the current year, expressed at the prices of the base year, is then obtained by summing and is converted to an index number by dividing by the total value of exports or imports in the base year.	8.22
Index of value of imports at constant prices	57		

(a) Source of original data: National Council of Wool Selling Brokers of Australia "News Release". Seasonally adjusted data published in *Monthly Review of Business Statistics* and *Digest of Current Economic Statistics*.

## APPENDIX A – continued

Series description	Page	Explanatory notes	Bureau publication reference numbers*
<b>OVERSEAS TRANSACTIONS –</b> <i>continued</i>			
Gold and net foreign assets – Official and banking institutions	58	Australia's official reserve assets (including gold tranche position with the International Monetary Fund as well as holdings of special drawing rights issued by the I.M.F.) and net foreign exchange holdings of trading banks. Holdings of gold and assets denominated in foreign currencies have been converted to Australian dollars on the basis of official parity relationships.	(b)
<b>OVERSEAS ARRIVALS –</b> Short-term visitors arriving	59	Visitors arriving who state that they intend to stay in Australia for a period of less than one year. Includes U.S. troops visiting Australia on rest and recreation leave; (this scheme commenced to operate in October 1967 and was discontinued in December 1971).	4.1; 4.3
<b>EMPLOYMENT AND LABOUR –</b> <b>Civilian Labour Force –</b>			
Males	60	Estimates are based on the results of a quarterly population survey, which is carried out at a sample of households throughout Australia in February, May, August and November each year. The sample was completely redesigned during 1972. Before the redesign, a one per cent sample throughout Australia was used. About 40,000 private dwellings (houses, flats, etc.) as well as a sample of other dwellings (hotels, motels, etc.) were included. In the new sample, the proportion of the population included varies from State to State but, in aggregate, about two-thirds of one per cent of the population of Australia is included. The new sample includes about 27,000 private dwellings as well as a sample of other dwellings. The survey information is obtained by means of personal interviews carried out by specially trained enumerators. The estimates relate to all persons aged 15 years and over, except members of the permanent armed forces, national service men enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations.	6.20; 6.22
Married women	61		
All females	62		
Persons	63		
Participation rates –			
Males	64		
Females	65		
<b>Unemployed –</b>			
Males	66		
Females	67

## APPENDIX A — continued

Series description	Page	Explanatory notes	Bureau publication reference numbers*
<b>EMPLOYMENT AND LABOUR — continued</b>		<p><i>The labour force</i> comprises the employed and the unemployed. The remainder of the population is classified as not in the labour force.</p> <p><i>Employed persons</i> comprise all those who, during survey week</p> <ul style="list-style-type: none"> <li>(a) did any work for pay, profit, etc. in a job or business, or on a farm; or</li> <li>(b) worked fifteen hours or more without pay in a family business (or farm); or</li> <li>(c) had a job, business or farm but were not at work because of illness, accident, leave, holiday or industrial dispute or production hold-up due to bad weather, plant breakdown, strike, etc.</li> </ul> <p><i>Unemployed persons</i> comprise all those who, during survey week, did no work at all, and who either</p> <ul style="list-style-type: none"> <li>(a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available, or had not already made definite arrangements to start work in a new job after survey week); or</li> <li>(b) were laid off from their jobs without pay for the whole week.</li> </ul> <p>From August 1971 onwards, trainee teachers have been excluded from estimates of the labour force, in accordance with 1971 Census definitions.</p> <p><i>The labour force participation rate</i> for any group is the percentage of persons in that group who are in the labour force.</p>	
<b>Wage and Salary Earners in Civilian Employment —</b> Males Females Persons Private — Persons	69 70 71 72	Original data, except those relating to government employees, are based on benchmarks derived from the population censuses of June 1954, 1961 and 1966. Estimates for other months are derived from current pay-roll tax returns, returns of	6.4; 6.12

\*See page 166 for key.

## APPENDIX A — continued

Series description	Page	Explanatory notes	Bureau publication reference numbers*
<b>EMPLOYMENT AND LABOUR —</b> <i>continued</i>			
<b>Wage and Salary Earners in Civilian Employment —</b> <i>continued</i>			
Government — Persons	73	government employment, some other direct returns of employment, and estimates of the number of employees not covered by these collections. Defence forces and employees in agriculture and private domestic service are excluded.  The figures relate only to wage and salary earners, not the total labour force. They therefore exclude employers, self-employed persons and unpaid helpers.  Two series of estimates are shown, the first covering the period June 1954 to June 1966, the second the period from June 1966. The census definitions at the 1954 and 1961 Censuses were such that a person's labour force status tended to be determined according to his major activity, and hence many part-time employees were classified as not employed. At the 1966 Census, labour force status was based on a person's actual activity during a specified week. As a result the current series of estimates are at higher levels than the 1954 to 1966 estimates. In due course, estimates for the period prior to June 1966 will be revised, but on a basis comparable with that of the 1961 Census benchmarks; the information needed to revise these benchmarks on the 1966 Census basis is not available.  At the 1971 population census trainee teachers were for the first time classified as not in the labour force. They have been excluded from estimates of employed wage and salary earners for the period from July 1971, the numbers of males and females excluded in July being approximately 7,000 and 17,000 respectively.	
Manufacturing — Persons	74		
Commerce — Persons	75		
Government — Persons	73	The figures for government employees include all civilian employees, within Australia, of government bodies (Commonwealth, State, local and semi-government) in services such as railways, tramways, banks, post office, air transport, education (including universities), broadcasting, television, police, public works, factories and munitions establishments, departmental hospitals and institutions, migrant hostels, etc., as well as administrative employees.	6.4; 6.12

\*See page 166 for key.

## APPENDIX A — continued

<i>Series description</i>	<i>Page</i>	<i>Explanatory notes</i>	<i>Bureau publication reference numbers*</i>
<b>EMPLOYMENT AND LABOUR —</b> <i>continued</i>			
<b>Number Receiving Unemployment Benefit —</b>			6.4
Males	76	The figures comprise all those on unemployment benefit at the Saturday nearest the end of the month.	
Females	77	To qualify for an unemployment benefit, a person must establish that he is unemployed and that his unemployment is not due to his being a direct participant in a strike, that he is capable and willing to undertake suitable work, and that he has taken reasonable steps to obtain such work. Registration with the local Commonwealth District Employment Office is necessary. There is a waiting period of seven days during which benefit is not payable, but this waiting period is not required more than once in any period of thirteen weeks. It excludes persons receiving sickness or special benefits and persons receiving the special benefits paid to migrants in reception and training centres.	
Persons	78		
<b>Number Registered for Employment —</b>			6.4; (c)
Males	79	The figures comprise all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month, who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S. All recipients of unemployment benefit are included.	
Females	80		
Persons	81		
<b>Number Registered for Employment Excluding School Leavers —</b>			(c)
Males	82	<i>School leavers</i> are persons under the age of twenty-one who, at the time of registering with the Commonwealth Employment Service	
Females	83	(a) had ceased full-time primary or secondary education within the previous three months; or	
Persons	84	(b) were still at school but notified the Service that they would leave school before the end of the school year if a full-time job were available.	
<b>Job Vacancies Registered —</b>			6.4; (c)
For males	85	The figures comprise all job vacancies notified to the C.E.S. which were still unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month. Vacancies for full-time,	
For females	86		
Total	87		

(c) Source of original data: Department of Labour "Monthly Review of the Employment Situation" (also includes seasonally adjusted data).

\* See page 166 for key.

## APPENDIX A — continued

Series description	Page	Explanatory notes	Bureau publication reference numbers*
<b>EMPLOYMENT AND LABOUR —</b> <i>continued</i>			
<b>Factory Overtime</b>	88	part-time, permanent, temporary, and seasonal positions are included. Separate statistics of vacancies for school leavers are not available as employers, when notifying vacancies, rarely distinguish between school leavers and other juniors.  Results obtained from a survey of overtime worked in a number of larger private factories throughout Australia.	(d)
<b>WAGES —</b> Average weekly earnings per employed male unit	89	The estimates are derived from particulars of employment and wages and salaries recorded on pay-roll tax returns, from other direct collections and from estimates of the unrecorded balance. The figures relate to civilians only. In addition to salary and wage payments at award rates they include earnings of employees not covered by awards, overtime earnings, over-award and bonus payments, payments made in advance or retrospectively during the periods specified, etc. Because particulars of wages and salaries paid are not available for males and females separately from the sources used for this series, average weekly earnings have been calculated in terms of male units, i.e. total male employees plus a proportion of female employees, the proportion being derived from the estimated ratio of female to male average earnings. As the number of male units used in calculating average weekly earnings for Australia is the sum of the estimates for the States, a separate ratio of female to male average earnings for Australia as a whole is not used. The weighted averages of the State ratios are approximately as follows: September quarter 1966 to December quarter 1970, 52.5 per cent; year 1971, 53.5 per cent; March and June quarters 1972, 54.5 per cent; September quarter 1972 to March quarter 1973, 55.5 per cent. At the 1971 population census all trainee teachers were for the first time classified as not in the labour force. Previously those enrolled at government teachers colleges (and in some cases at other institutions also) had been included. Trainee teachers affected by the reclassification are excluded, together with their allowances, from the calculation of average weekly earnings from September quarter 1971. The effect of their exclusion was to increase average earnings figures in all States by approximately 30 cents.	6.16; 6.18

(d) As in (c) above. Seasonally adjusted data also included in *Digest of Current Economic Statistics*.

\* See page 166 for key.

## APPENDIX A — continued

Series description	Page	Explanatory notes	Bureau publication reference numbers*
<b>INTERNAL TRADE —</b>			
<b>Retail Sales —</b>			
Monthly retail sales — All items (excl. motor vehicles, parts, petrol, etc.)	90	The figures relate to retail sales of goods (as distinct from services, repairs, accommodation, entertainment, meals, etc.) by establishments which normally sell goods by retail to the general public. Hotels, garages and service	11.6
Quarterly retail sales —		stations are also included in respect of goods	11.4; 11.5
Food and drink	91	sold.	
Clothing, hardware, etc.	92		
All other goods (excl. motor vehicles, parts, petrol, etc.)	93	For the monthly series only, sales of motor vehicles, parts, petrol, etc. are excluded. Goods sold from farms direct are also excluded.	
All items (excl. motor vehicles, parts, petrol etc.)	94	Figures for quarters up to and including September quarter 1972 are on a basis comparable with the 1961-62 Census of Retail	
Motor vehicles, parts, petrol, etc.	95	Establishments, while figures for December quarter 1972 are on a basis comparable with the 1968-69 Census of Retail Establishments.	
		To assist users to establish a relationship between figures on the two bases, the figures for December quarter 1972 and the percentage movements between quarters as measured by the monthly and quarterly samples based on the 1961-62 Census, were used to derive quarterly figures back to September quarter 1971 on a basis comparable with the 1968-69 Census.  The monthly figures are on a basis comparable with the 1961-62 Census. Original figures from the month of April 1971 and from June quarter 1971 are subject to revision when more precise information is available relating to trading by new businesses.	
<b>Registrations of New</b>			
<b>Motor Vehicles —</b>			
Motor cars and station wagons	96	Registrations processed by the motor vehicle registration authorities in the States and Territories during the period. The figures	14.1; 14.2; 14.6
Other vehicles	97	include new Commonwealth-owned vehicles	
Total	98	other than those belonging to the defence services.	
<b>New Wheeled Tractors Sold for Agricultural Purposes</b>	99	Up to June 1965 the figures were collected by the Department of Primary Industry. From September 1967, a "tractor" is defined as a prime mover mounted on wheels which has been designed for general use and which may be fitted with a variety of agricultural, earth-moving or materials-handling attachments.	12.18

\*See page 166 for key.

## APPENDIX A — continued

<i>Series description</i>	<i>Page</i>	<i>Explanatory notes</i>	<i>Bureau publication reference numbers*</i>
<b>BUILDING, ETC —</b>			
<b>Building Approvals —</b>			
New houses and flats approved — Number	100	Building permits issued by local government authorities and contracts let, work commenced and day labour projects authorised by government authorities. Number of houses and flats relate to individual living units. Value of total buildings approved includes all alterations and additions.	3.2; 3.5; 3.6
New private houses and flats approved — Number	101		
Value of total buildings approved	102		
<b>Buildings Commenced —</b>			
New houses and flats commenced — Number	103	Compiled from returns obtained from building contractors engaged in the erection of new buildings, owner builders and government authorities. Number of houses and flats relate to individual living units. Values exclude the value of land and represent the estimated value of buildings on completion.	3.5; 3.6
New private houses and flats commenced — Number	104		
Value of new private buildings commenced	105		
Value of new buildings, other than new houses and flats, commenced	106		
Value of total new buildings commenced	107		
<b>Buildings Completed —</b>			
New houses and flats completed — Number	108		
New private houses and flats completed — Number	109		
<b>Value of Work Done —</b>			
Value of work done on new houses and flats	110		
Value of work done on other new buildings	111		
Value of work done on all new buildings	112		
<b>Capital Expenditure by Private Businesses —</b>			
New buildings and structures	113	Statistics are from returns obtained from private businesses subject to pay-roll tax (other than rural, professional, gas and electricity), from government banks and airlines, and from other businesses not subject to pay-roll tax undertaking projects of more than \$500,000 in any half year.	5.7; 5.8
Other new capital equipment	114		
Manufacturing	115		
Mining	116		
Other industries	117		
Total new capital expenditure	118		
<b>Anticipated New Capital Expenditure by Private Businesses</b>	119	Anticipated by individual businesses at the beginning of the period.	5.7; 5.8

\*See page 166 for key.

## APPENDIX A — continued

Series description	Page	Explanatory notes	Bureau publication reference numbers*
<b>FINANCE —</b> Savings banks — Depositors' balances	120	Particulars for the Commonwealth Savings Bank, The State Savings Bank of Victoria, The Savings Bank of South Australia, The Rural and Industries Bank of Western Australia and The Hobart Savings Bank relate to the end of the month, those for The Launceston Bank for Savings to the last Monday in the month, and those for the other savings banks to the last Wednesday in the month. Excludes External Territories.	5.2; 5.28
Major Trading Banks — Total deposits	121	Major trading banks comprise the Commonwealth Trading Bank, Australia and New Zealand Banking Group Ltd, The Bank of Adelaide, Bank of New South Wales, The Commercial Bank of Australia Ltd, The Commercial Banking Company of Sydney Ltd, The National Bank of Australasia Ltd. Includes External Territories.	5.2; 5.3
Loans, advances, etc.	122		
Liquid assets and Commonwealth Government securities	123	Includes notes, coin cash with Reserve Bank, Treasury bills and Treasury notes and other Commonwealth Government securities.	5.2; 5.3
Listed Companies — New money raised	124	Refers to companies listed on Australian stock exchanges. New money raised is the net amount of cash transferred from the investing public to the issuing companies through the issue of shares, debentures, notes and similar securities and the acceptance of deposits. As from the September 1970 quarter, the investing public has been redefined to include all non-company subscribers, Australian life insurance companies and Australian Government and private superannuation funds. The comparability of the statistical series, however, has not been significantly affected. For a full description of the changes in definitions see the latest issue of the statistical bulletin <i>New Capital Raisings by Companies in Australia</i> (Reference No. 5.9).	5.9; 5.10
Instalment Credit for Retail Sales : Balances Outstanding —		Instalment credit schemes covered include hire purchase, time payment, budget account and personal loan schemes conducted by businesses primarily for the financing of retail sales of goods.	5.18; 5.19

\*See page 166 for key.

## APPENDIX A – continued

<i>Series description</i>	<i>Page</i>	<i>Explanatory notes</i>	<i>Bureau publication reference numbers*</i>
<b>FINANCE – continued</b>			
Retail businesses	125	Schemes conducted by retail establishments which come within the scope of the Census of Retail Establishments, or by subsidiary finance businesses set up by retailers primarily for the purpose of financing their retail sales.	
Non-retail finance businesses	126	Schemes conducted by businesses, which are not themselves retailers, but which engage in financing such schemes.	
All businesses	127		
<b>Taxation Revenue – Commonwealth and State consolidated revenue funds</b>	128	Obtained from monthly statements of consolidated revenue and expenditure issued by Commonwealth and State Treasuries. Excludes any taxation collections paid direct to trust funds.	
<b>NATIONAL ACCOUNTS AT CURRENT PRICES – Wages, Salaries and Supplements</b>	129	Payments in the nature of wages and salaries, including allowances for income in kind (board and quarters, etc.), together with supplements to wages and pay and allowances of members of the forces. Supplements consist of employers' contributions to pension and superannuation funds, direct payments of pensions and retiring allowances, and amounts paid as workers' compensation for injuries.	7.5; 7.6
<b>Gross Domestic Product –</b>	130	The total market value of goods and services produced in Australia within a given period after deduction of the cost of goods and services used up in the process of production, but before deducting allowances for the consumption of fixed capital.	7.5; 7.6
Farm	132	That part of gross domestic product arising from production in rural industries.	
Non-farm	134	That part of gross domestic product arising from production in all industries other than rural.	
<b>Gross National Expenditure</b>	136	Total expenditure within a period on final goods and services bought by Australian residents.	7.5; 7.6

\*See page 166 for key.

## APPENDIX A – continued

<i>Series description</i>	<i>Page</i>	<i>Explanatory notes</i>	<i>Bureau publication reference numbers*</i>
<b>NATIONAL ACCOUNTS AT CURRENT PRICES – continued</b>			
<b>Final Consumption Expenditure – Private</b>	138	Expenditure on goods and services for consumption by persons and private non-profit organisations serving households. Includes personal expenditure on motor vehicles and other durable goods and the imputed rent of owner-occupied dwellings, but excludes purchases of dwellings. Also excludes consumer debt interest.	7.5; 7.6
<b>Government</b>	140	Expenditure by public authorities (other than those classified as public enterprises) on wages, salaries and supplements, and on goods and services other than expenditures which result in the creation or the acquisition of fixed tangible assets or an increase in stocks. Charges for goods sold or services rendered are offset against purchases. Net expenditure overseas by general government bodies and purchases from public authorities are included. All expenditure on defence is classified as final consumption expenditure.	7.5; 7.6
<b>Gross Fixed Capital Expenditure – Total</b>	142	Expenditure on fixed assets whether for additions or replacements. This item includes expenditure on dwellings, other building and construction, vehicles, plant, machinery, etc., but excludes expenditure on fixed assets for defence purposes. It includes expenditure on second-hand assets, as well as new assets, less sales of existing assets. Expenditure on ordinary repair and maintenance is excluded. All expenditure on roads, including maintenance, however, is classified as capital expenditure.	7.5; 7.6
<b>Private</b>	144	Expenditure on fixed assets, whether for additions or replacements. This item includes expenditure on second-hand assets as well as new assets, less sales of existing assets. Dwellings purchased by persons from public housing authorities are included in private capital expenditure.	

\*See page 166 for key.

## APPENDIX A – continued

<i>Series description</i>	<i>Page</i>	<i>Explanatory notes</i>	<i>Bureau publication reference numbers*</i>
<b>NATIONAL ACCOUNTS AT CURRENT PRICES –</b> <i>continued</i>			
<b>Gross Fixed Capital Expenditure–</b> <i>continued</i>			
Public	146	Expenditure on fixed assets, whether for additions or replacements, other than for defence purposes. Because it has been impossible to make a satisfactory dissection, all expenditure on roads, including maintenance, is classified as capital expenditure.	
Exports of Goods and Services	148	Exports of goods and value of services (including transportation, travel, government and miscellaneous services), provided to overseas residents by residents of Australia, and the net value of Australian gold production.	7.5; 7.6; 8.2
Imports of Goods and Services	150	Imports of goods and value of services (including transportation, travel, government and miscellaneous services) purchased from overseas residents by residents of Australia.	7.5; 7.6; 8.2
<b>NATIONAL ACCOUNTS AT AVERAGE 1966-67 PRICES –</b>			
<b>Gross Domestic Product –</b>			
Farm	131	These estimates show the values of gross domestic product and some of its main aggregates revalued in such a way that the direct effects of price changes which have occurred over the periods under review have been removed. In concept, they may be thought of as being derived by expressing the value of every component commodity as the product of a price and a quantity, and by then substituting for each actual current price the corresponding average price for the base year 1966-67. Aggregates at average 1966-67 prices for each year are then obtained by summation.	7.5; 7.6
Non-farm	133		
	135		
<b>Gross National Expenditure</b>	137		
<b>Final Consumption Expenditure –</b>			
Private	139		
Government	141		
<b>Gross Fixed Capital Expenditure –</b>

- 14. 6      Registrations of New Motor Vehicles (Preliminary). (monthly)

## APPENDIX B

## METHODS OF ADJUSTMENT EMPLOYED

The seasonally adjusted series given in this bulletin and other publications of the Bureau have been calculated by means of computer programs of the Census Method II, X-11 Variant (for monthly series) and the X-11Q Variant (for quarterly series). As described in paragraphs 16 to 18 of the "Notes on Seasonal Adjustment Methods", the manner in which these programs have been employed for each series depends on the selection made from among alternative optional procedures allowed for in the programs. The selection of program options has been guided by the evidence of special analyses made for each individual series.

Users should particularly note whether use has been made of trading-day adjustment and of prior adjustment for the effects of movable holidays, namely Easter and Australia Day, since their application can materially affect the results obtained and the interpretation to be placed on them. Adjustments for trading-day effects and the effects of movable Easter and Australia Day holidays have been applied to series where special analyses made beforehand have shown that variations, arising from these effects, in the number of trading or working days in the month have significantly affected the series. For some of the series subject to trading-day adjustment, however, the results of analyses have not warranted further adjustment for Easter or Australia Day effects.

In seasonally adjusting the series by means of the X-11 and X-11Q programs, certain program options, not referred to in the table below, were used. Details of these options are:

- (1) Multiplicative adjustment has been used for all series with the exception of some components of the National Accounts series.
- (2) Trading-day adjustments, where applied to monthly series, have been based upon prior daily weights derived from analyses made beforehand and applied to the entire series. Where trading-day adjustments have been applied, allowance for the length of month or quarter has been combined with trading-day factors.
- (3) Prior adjustment has been used only for purposes referred to in the following tables.
- (4) The program routine for adjusting the trend for the effect of severe industrial disputes has not been used for any series.

Moving averages for trend in monthly series are options specified in accordance with moving averages selected by the X-11 program in analyses made beforehand. Moving averages for monthly seasonal factors are standard (3x5-term) except where alternative options are specified. The X-11Q program has only standard moving averages for trend (5-term) and seasonal factors (3x5-term).

Some of the components of the National Accounts series were not amenable to adjustment by the X-11Q program, and special adjustments were used. The special methods are described in Table 2. For those components which were adjusted by the X-11Q program, use was made only of standard limits for graduated treatment of extremes.

The application of other X-11 and X-11Q program options for each seasonally adjusted series published by the Bureau in this or other publications is as set out in the following tables.

## APPENDIX B — continued

TABLE 1

NOTE. For terminology refer to paragraphs 16 to 18 of the "Notes on Seasonal Adjustment Methods".

Series description	Page No.	Moving averages used		Limits for graduated treatment of extremes	Adjustment made for			
		Trend	Seasonal factors		Trading day variation	Easter	Australia Day	Other influences
<b>PRODUCTION —</b>								
Black coal	34	13-term	3x9-term	1.5 & 2.5*	(a)	(a)	(a)	(a)

ALL OTHER CURRENT PRICES SERIES ARE ADJUSTED AGGREGATIVELY. SEE TABLE 2.

**NATIONAL ACCOUNTS AT  
AVERAGE 1966-67 PRICES**

AS FAR AS POSSIBLE, THESE SERIES HAVE BEEN ADJUSTED USING METHODS SIMILAR TO THOSE USED FOR THE CORRESPONDING CURRENT PRICE SERIES. FOR DETAILS OF DIFFERENCES IN THE METHOD USED, SEE TABLE 2.

- \* These are X-11 program standard procedures which are employed unless an alternative is specified. The X-110 program has only standard program-selected moving averages for trend and seasonal factors.
- \*\* Series not published in this bulletin.
- + Denotes change in option or method previously selected for the adjustment of a series.
- (a) The influence of trading-day variation together with major public holidays and patterns of annual leave which may vary from year to year.
- (b) The effect of the industrial dispute disrupting Victorian power supplies in February 1972. (The effect of this dispute has been retained in the seasonally adjusted data.)
- (c) An abrupt change in seasonality affecting mainly June and July from June 1968, due to change in the pattern of annual leave and plant maintenance arrangements.
- (d) An abrupt change in the seasonality affecting mainly December and January from December 1963 due to the extension of statutory annual leave in October 1963.
- (e) An abrupt change in the seasonality affecting mainly January from 1972 due to changes in production patterns.
- (f) An abrupt change in the seasonality affecting mainly November to April from November 1959.
- (g) An abrupt change in the seasonality affecting all months except July and August from September 1957.
- (h) The effects of the Australian stevedoring dispute in January-February 1956.

APPENDIX B — *continued*

- (i) The abrupt changes in level (1961-62 and 1966-67) due to changes in the base of the index.
- (j) An abrupt change in the seasonality affecting all months except June from December 1957.
- (k) Abrupt changes in level and seasonal pattern from July 1971 due to the exclusion of trainee teachers from estimates of the labour force.
- (l) The abrupt change in level (from June 1966 onwards) due to the adoption of new labour force definitions for the 1966 Population Census.
- (m) The abrupt change in seasonal pattern (from June 1966 onwards) due to the adoption of new labour force definitions for the 1966 Population Census.
- (n) Changes in administrative recording procedure from 1967.
- (o) The effects of public holidays which fall within the survey week.
- (p) The effects of major awards and determinations of Commonwealth and State industrial authorities. (The effects of these awards and determinations are retained in the seasonally adjusted data ). Also, allowance was made for the varying incidence of pay days.
- (q) The re-analysis has been performed on the data up to September quarter 1972 comparable with the 1961-62 Census of Retail Establishments. At this stage there is insufficient data comparable with the 1968-69 Census to make the necessary adjustments to allow data on this basis to be incorporated in the re-analysis. Consequently, it is planned to adjust the data on the 1968-69 Census basis using factors calculated from the data on the 1961-62 Census basis, until December quarter 1973 data is available.
- (r) An abrupt change in the seasonality affecting mainly June and December quarters after 1962.
- (s) These half-yearly series have been seasonally adjusted by applying the standard X-11Q program to the quarterly series obtained by allocating the figures for the half-year ended June to the June quarter and the other half-year to the December quarter, while the March and September quarter figures are calculated to have no significant seasonality. The adjustment factors for the June and December quarters are then applied to the half-yearly series.
- (t) The seasonal analysis of anticipated new capital expenditure for the mining industry shows only an insignificant seasonal pattern.
- (u) Effects of twelve-weekly payments of child-endowment and war pension paid directly into savings bank accounts.
- (v) A change in the seasonality affecting mainly January and February from January 1970 due to growth in Christmas Club accounts.
- (w) Variation due to the general business practice of monthly settlement of accounts at or near the end of the month, the perceptible effects of which vary according to the proximity of banks' weekly balancing days (Wednesdays) to the end of the month.

APPENDIX B — *continued*

TABLE 2. AGGREGATIVELY ADJUSTED SERIES

It should be noted that, except where otherwise stated, the directly adjusted quarterly series referred to in the table below have been seasonally adjusted multiplicatively by the X-11Q program using *standard* program options, namely 5-term trend moving average, 3x5-term seasonal moving average, and limits for graduated treatment of extremes of 1.5 & 2.5 standard deviations.

<i>Series description</i>	<i>Page No.</i>	<i>Methods employed</i>
<b>PRODUCTION —</b>		
Beef and veal	49	The sum of <i>Beef</i> and <i>Veal</i> . (For details of program options employed, <i>see</i> Table 1).
Mutton and lamb	50	The sum of <i>Mutton</i> and <i>Lamb</i> . (For details of program options employed, <i>see</i> Table 1).
Meat	**	The sum of <i>Beef</i> , <i>Veal</i> , <i>Mutton</i> , <i>Lamb</i> and <i>Pigmeat</i> . (For details of program options employed, <i>see</i> Table 1).
<b>OVERSEAS TRANSACTIONS —</b>		
Total imports	54	Adjusted by first removing <i>imports of large aircraft, all warships, and ships (and other vessels) imported for temporary operation in Australian waters</i> , then adjusting the residual multiplicatively, using 13-term trend moving average, 3x9-term seasonal moving average, standard limits for graduated treatment of extremes, with adjustment for trading-day variation and prior adjustment for Easter and Australia Day; and, finally, adding back to this adjusted series and unadjusted components <i>imports of large aircraft, all warships, and ships (and other vessels) imported for temporary operation in Australian waters</i> .
Gold and net foreign assets — Official and banking institutions	58	Adjusted by first removing the components <i>allocated special drawing rights, and drawings against International Monetary Fund credit tranche</i> ; then adjusting the residual multiplicatively using 9-term trend moving average, 3x5-term seasonal moving average, and standard limits for graduated treatment of extremes; and, finally, adding back to this adjusted series the unadjusted components <i>allocated special drawing rights and drawings against International Monetary Fund credit tranche</i> .
<b>OVERSEAS ARRIVALS AND DEPARTURES —</b>		
Short-term visitors arriving	59	The sum of <i>short-term visitors excluding U.S. troops arriving for rest and recreation leave</i> (adjusted multiplicatively, using 23-term trend moving average, 3x9-term seasonal moving average, standard limits for graduated treatment of extremes, with adjustment for trading-day variation and prior adjustment for the effects of the 1956 Olympic Games, the 1962 Commonwealth Games and the 1971 Rotary Convention) and <i>U.S. troops arriving for rest and recreation leave</i> (adjusted only for trading-day variation). Note that the effects of the Rotary Convention, etc. have been included in the seasonally adjusted series.

APPENDIX B — *continued*TABLE 2. AGGREGATIVELY ADJUSTED SERIES — *continued*

<i>Series description</i>	<i>Page No.</i>	<i>Methods employed</i>
<b>OVERSEAS ARRIVALS AND DEPARTURES — <i>continued</i></b>		
Total arrivals	**	<p>The sum of <i>total arrivals excluding U.S. troops arriving for rest and recreation leave</i> (adjusted multiplicatively, using 23-term trend moving average, 3x9-term seasonal moving average, standard limits for graduated treatment of extremes, with adjustment for trading-day variation and with prior adjustment for the effects of</p> <ul style="list-style-type: none"> <li>(a) the 1956 Olympic Games, the 1962 Commonwealth Games, and the 1971 Rotary Convention,</li> <li>(b) an apparent abrupt change in seasonality affecting mainly January, February, March and July after December 1954,</li> <li>(c) Easter after 1960),</li> </ul> <p>and <i>U.S. troops arriving for rest and recreation leave</i> (adjusted only for trading-day variation). The effects of the Rotary Convention, etc. have been retained in the seasonally adjusted series.</p>
Total departures	**	<p>The sum of <i>total departures excluding U.S. troops departing from rest and recreation leave</i> (adjusted multiplicatively, using 23-term trend moving average, 3x9-term seasonal moving average, standard limits for graduated treatment of extremes, with adjustment for trading-day variation and with prior adjustment for the effects of</p> <ul style="list-style-type: none"> <li>(a) the 1956 Olympic Games and the 1971 Rotary Convention,</li> <li>(b) an apparent abrupt change in seasonality affecting all months except June after December 1957),</li> </ul> <p>and <i>U.S. troops departing from rest and recreation leave</i> (adjusted only for trading-day variation). The effects of the Rotary Convention, etc. have been retained in the seasonally adjusted series.</p>
<b>EMPLOYMENT AND LABOUR —</b>		
Number Registered for		
Employment —		
Males	79	<p>The sum of <i>number registered excluding school leavers</i> (for details of program options employed, see Table 1) and <i>number of school leavers registered</i> (adjusted multiplicatively using 13-term trend moving average, standard 3x5-term seasonal moving average, and limits 2.5 &amp; 4.0 for graduated treatment of extremes).</p>
Females	80	As for males.
Persons	81	As for males.

\*\* Series not published in this bulletin.

## APPENDIX B – continued

TABLE 2. AGGREGATIVELY ADJUSTED SERIES – continued

<i>Series description</i>	<i>Page No.</i>	<i>Methods employed</i>
<b>INTERNAL TRADE –</b>		
<b>Registrations of New Motor Vehicles –</b>		
Total	98	The sum of the directly adjusted series <i>Registrations of New Motor Vehicles – Cars and Station Wagons</i> and <i>Registrations of New Motor Vehicles – Other Vehicles</i> . (For details of program options employed see Table 1.)
<b>FINANCE –</b>		
<b>Instalment Credit for Retail</b>		
<b>Sales: Balances Outstanding –</b>		
All businesses	127	The sum of the directly adjusted quarterly series for <i>retail businesses</i> and the corresponding quarterly figures in the directly adjusted monthly series for <i>non-retail finance businesses</i> . (For details of program options employed, see Table 1.). Monthly figures are available only for non-retail finance businesses, the major component, and the adjustment on this basis is preferred to a directly adjusted quarterly series.
<b>NATIONAL ACCOUNTS AT</b>		
<b>CURRENT PRICES –</b>		
<b>Wages, Salaries and</b>		
<b>Supplements</b>	129	Directly adjusted, see Table 1.
<b>Gross Operating Surplus –</b>		
<b>Trading Enterprises –</b>		
Companies	**	Directly adjusted, see Table 1.
Other	**	The sum of farm and non-farm. <i>Farm</i> : gross farm product at factor cost (see below), less three directly adjusted farm cost series and farm company income (directly adjusted). <i>Non-farm</i> : The sum of five component series (directly adjusted).
Financial Enterprises Less	**	Directly adjusted, see Table 1.
Imputed Bank Service Charge		
<b>Indirect Taxes less Subsidies</b>	**	Indirect taxes (directly adjusted) less special adjustments of wheat subsidy and wool subsidy less all other subsidies (directly adjusted).
<b>Gross Domestic Product</b>	130	The sum of the five preceding series.
<b>Exports of Goods and Services</b>	148	The sum of four directly adjusted series (exports f.o.b.; transportation and travel; gold production; and other goods and services).
<b>Imports of Goods and Services</b>	150	The sum of three directly adjusted series (imports f.o.b.; transportation and travel; and other goods and services).
<b>Gross National Expenditure</b>	136	The sum of gross domestic product and imports of goods and services less exports of goods and services.

\*\* Series not published in this bulletin.

APPENDIX B — *continued*TABLE 2. AGGREGATIVELY ADJUSTED SERIES — *continued*

<i>Series description</i>	<i>Page No.</i>	<i>Methods employed</i>
<b>NATIONAL ACCOUNTS AT CURRENT PRICES — <i>continued</i></b>		
<b>Final Consumption Expenditure —</b>		
Private —		
Food	**	Directly adjusted, <i>see</i> Table 1.
Cigarettes, tobacco and alcoholic drinks	**	The sum of two directly adjusted series (cigarettes and tobacco; alcoholic drinks)
Clothing, footwear and drapery	**	Directly adjusted, <i>see</i> Table 1.
Household durables	**	The sum of two directly adjusted series (electrical goods; and other household durables).
Purchase of motor vehicles	**	Directly adjusted, <i>see</i> Table 1.
Rent	**	Seasonality is not significant and the original series is therefore used.
Other goods and services	**	The sum of seven directly adjusted series.
Total	138	The sum of 15 component series.
Government	140	Directly adjusted, <i>see</i> Table 1.
<b>Gross Fixed Capital Expenditure —</b>		
Private —		
Dwellings	**	Directly adjusted, <i>see</i> Table 1.
Other building and construction	**	Directly adjusted, <i>see</i> Table 1.
All other	**	Directly adjusted, <i>see</i> Table 1.
Total	144	The sum of the three adjusted components above.
Public —		
Public enterprises	**	Directly adjusted, <i>see</i> Table 1.
General government	**	Directly adjusted, <i>see</i> Table 1.
Total	146	The sum of the two preceding series.
Total	142	The sum of Private and Public.
<b>Increase in Stocks</b>	**	The sum of farm and non-farm. <i>Farm</i> : sum of book values of four farm series less farm stock valuation adjustment. <i>Non-farm</i> : sum of book values of four non-farm series less non-farm stock valuation adjustment.
<b>Statistical Discrepancy</b>	**	Balancing item in the seasonally adjusted account.

\*\* Series not published in this bulletin.

APPENDIX B — *continued*TABLE 2. AGGREGATIVELY ADJUSTED SERIES — *continued*

<i>Series description</i>	<i>Page No.</i>	<i>Methods employed</i>
<b>NATIONAL ACCOUNTS AT CURRENT PRICES — <i>continued</i></b>		
Gross Domestic Product — Gross farm product	132	Gross farm product at factor cost plus farm indirect taxes (directly adjusted) less special adjustments of wheat subsidy and wool subsidy, less all other farm subsidies (not adjusted). Gross farm product at factor cost : Special adjustments of four components of gross value of production (wool, wheat, other grain and sugar cane) plus three directly adjusted series (other pastoral products; other crops; and dairying, poultry, etc.), less farm stock valuation adjustment, specially adjusted wheat marketing cost series and three directly adjusted cost series. The four components of gross value of production (wool, wheat, other grain and sugar cane) are adjusted by equal distribution of the production for any financial year over the four quarters of the year ended June. One effect of these methods is that changes in the annual production of these commodities first enter into the seasonally adjusted figures in the September quarter.
Gross non-farm product	134	Difference between gross domestic product and the farm component. As the farm component is utilised in obtaining gross domestic product, the non-farm component is independent of the special adjustments used in the farm component.
<b>NATIONAL ACCOUNTS AT AVERAGE 1966-67 PRICES —</b>		The constant-price series have been adjusted by methods similar to those used for the corresponding current-price series, the only exceptions being gross domestic product and gross fixed capital expenditure - public (see below).
Gross Domestic Product	131	The sum of farm and non-farm. <i>Farm</i> : similar method of adjustment to that for the current-price series. <i>Non-farm</i> : directly adjusted.
Gross Fixed Capital Expenditure — Public	147	Directly adjusted. The original series is the sum of gross fixed capital expenditure - public enterprises and gross fixed capital expenditure - general government.

\*\* Series not published in this bulletin.

## APPENDIX C

## MEASURES OF VARIABILITY

The following table shows, for series included in this bulletin and all other series published in seasonally adjusted form by the Bureau, selected measures of variability of the original and seasonally adjusted series, and of component series as computed in the course of seasonal adjustment, i.e. the trend, seasonal and irregular components. A corresponding measure of the variability of trading-day adjustment factors, where applicable, is also shown.

Where prior adjustments have been made (for such effects as the influence of Easter, Australia Day, or an apparent abrupt change in seasonality) their effect is excluded from the measures of variability given below for trend, irregular, seasonal factors and trading-day adjustments.

In some instances these figures are derived from analyses which do not include the latest available data.

\* From quarter to quarter in quarterly series; from half-year to half-year in half-yearly series.

\*\* Series not published in this bulletin.

- (a) In seasonally adjusting this series, allowance has been made by prior adjustment for Easter and/or Australia Day effects.
- (b) In seasonally adjusting this series, allowance has been made by prior adjustment for an apparent abrupt change in seasonality. (For further details, see Appendix B).
- (c) In the seasonal analysis of this series, allowance has been made by prior adjustment for the effects of trend discontinuities. (For further details, see Appendix B).
- (d) In the seasonal analysis of this series, allowance has been made by prior adjustment for the effects of exceptional irregular movements. (For further details, see Appendix B).
- (e) In seasonally adjusting this series, allowance has been made by prior adjustment for a special type of trading day variation, other than a simple weekly pattern. (For further details, see Appendix B).
- (f) Series adjusted aggregatively. Measures for trend and irregular components relate to estimates derived by direct analysis of the aggregatively adjusted series. Measures for seasonal and trading-day adjustment factors relate to equivalent direct adjustments implicit in the relationship between the original and the aggregatively adjusted series.
- (g) The effects of trading-day adjustments made to component series are included in the measures given for seasonal factors — separate details are not yet available.
- (h) Series contains insignificant seasonality. No adjustments have been made to the original data.
- (i) Series contains both positive and negative values. Measures of average percentage change in the series and its components of variation are not meaningful.
